DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-7 and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,977,511 (Meier). Meier teaches at least one detecting device for detecting an edge line of a sheet and a control unit for identifying a metal sheet edge to be welded as a dominant edge and another as a nondominant edge (fig. 13, item 56) and a means for reworking the nondominant edge (fig. 6, item 34); wherein the means for working is a pressing tool (figure 6, item 34); wherein the control unit is capable of transmitting a control signal to discard a metal sheet from the apparatus prior to welding (col. 2, ll. 20-55); wherein the control unit controls the welding device (fig. 13, item 58); where only one sheet is deformed, which would correspond to the nondominant edge (col. 2, ll. 50-57). The other sheet, which is not deformed, is the claimed dominant edge.

Response to Arguments

Applicant's arguments with respect to claims 6-7 and 17-21 have been considered but are moot in view of the new ground(s) of rejection.
